

## ALARIS HALF HEIGHT TURNSTILE

The Alaris gate offers an efficient and aesthetic option for access control with its stylish design as a combination of glass wings and stainless steel body.

All the gate models are space efficient security barriers with a compact design, yet offer sufficient space to integrate any access control system. They can be mounted with card readers, biometric readers, remote control and push button units via simple dry contact.

The Alaris model is a bidirectional gate

with a passage width of 50-55 cm. Side and center units are produced to create as many passage lanes as required. Thanks to the built in sensor technology, the gate provides both safe and secure passage. Status indicator LED lights are located on both directions of the gate, in green and red colors to show allowed passage directions.

In case of an emergency or power failure, the gate provides a fail-safe working solution by allowing free passage on both directions.
